Shelter-in-Place means seeking immediate shelter inside a building. This action may be taken during a release of toxic chemicals, biological or radioactive materials to the outside air or other emergencies.

**Steps to shelter-in-place:**

- If you are outside, seek cover in the nearest building.

- Move to floors above ground level. Take shelter in an interior room without windows or with the least number of windows.

- Shut and lock all windows. Shut interior and exterior doors.

- Await further instruction from UCI alerts and emergency personnel.

- Do not leave until an all-clear message is received.

- If you are off campus, stay away until an all-clear message is received.
