

# December Officer Contact Data

These statistics represent officer initiated contacts, also referred to as "stops." The people contacted in these stops include persons directly affiliated with the University community, including students, staff, faculty, patients and visitors, and University Hills residents, as well as others who are non-affiliates.

## Note

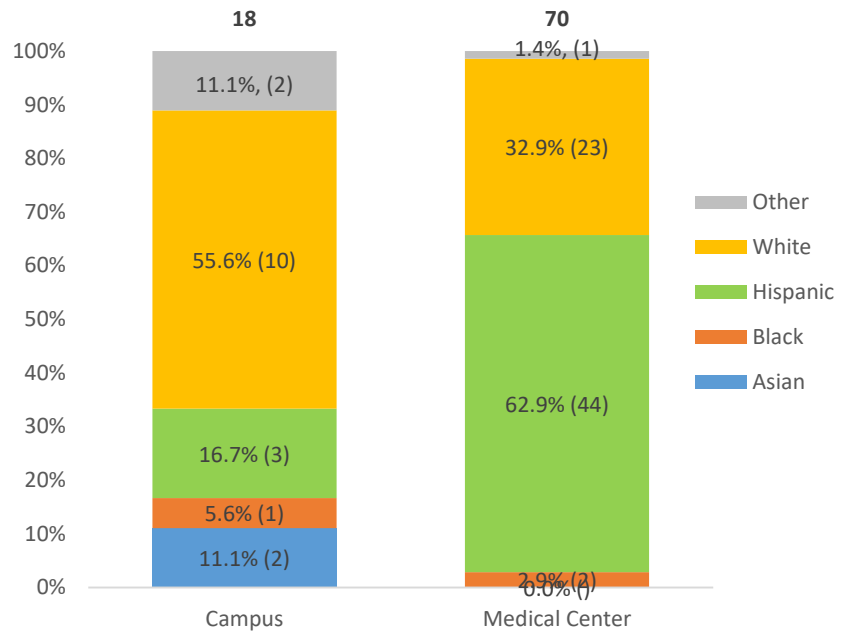

In October 2019, the department discovered that a change by our CAD/RMS vendor prevented us from accurately tracking officer initiated contact data.

The release of the Racial and Identity Profiling Act (RIPA) data collection module was purported to be close at hand (a few months away), so a decision was made to stop posting data until its release because of the inaccuracies.

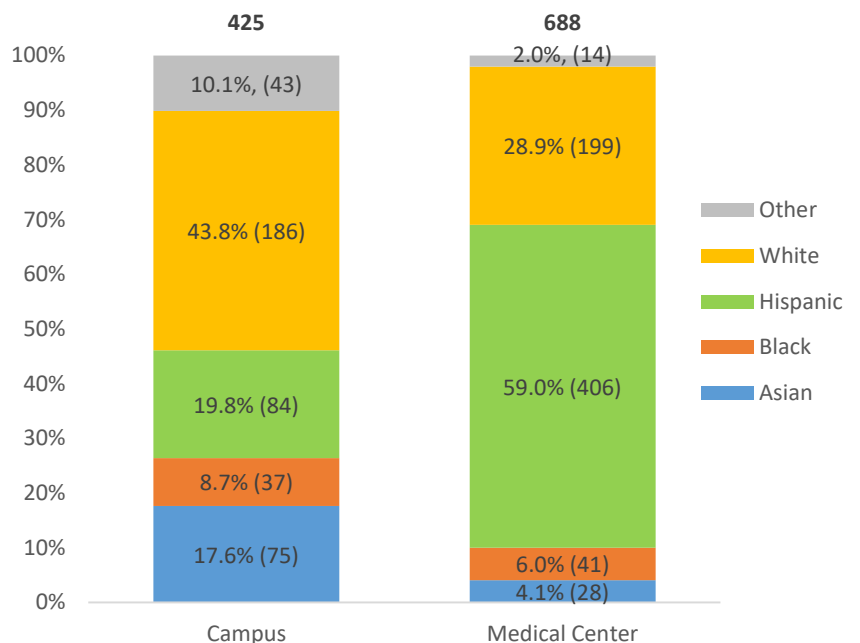

Because the system correction is taking longer than expected, the UCI Police Department developed a new method for capturing race data along with an audit mechanism to ensure the data is accurate.

Beginning in May 2020, race data for the preceding month will again be published every month to the website until such time that the RIPA (Racial and Identity Profiling Act) software project is completed.

## December Contact Characteristics

## Year-to-Date

\*Please refer to 'Note' for reasoning behind omitted data from January through March.

# November Officer Contact Data

These statistics represent officer initiated contacts, also referred to as "stops." The people contacted in these stops include persons directly affiliated with the University community, including students, staff, faculty, patients and visitors, and University Hills residents, as well as others who are non-affiliates.
